<b>Title of Paper: System Analysis and Design</b>	

<b>Unit</b>	<b>Description</b>	<b>Weighting</b>
I	Overview of systems analysis & Design, role of systems analyst, user clientele, categories of business systems - TPS, MIS , DSS OAS, Strategic information systems. System development strategies - classical, structured and Prototyping. Reasons for systems project initiation, Project selection and review - Committee methods, project requests. Preliminary investigation - scope of project, feasibility study, institutional v/s end-user applications.	25%
II	Requirement determination - process, data used, information produced, schedule, controls, transaction and decision requirements etc. Fact finding techniques - interview, questionnaires, document scanning, observation. Tools for specifications - decision trees, decision tables, structured English. Structured analysis - Physical and logical data flow diagrams, process charts, data directories. Application prototyping - rationale, suitability, steps, uses. Tools for prototyping - 4GL, report generators, application generators, screen generators. strategies for prototyping	25%
III	Modelling object classes, attributes & relationships. Automated tools - front end, back end, integrated tools. CASE tools- functionality and benefits. Objectives in system design. Components to be designed - output, files, database, input, controls, procedures, codes, program specifications. Management of Design Process. Output Design - needs, types of output, presentation of outputs. Printed outputs. Input and controls - capture of input data, source documents, coding methods. Input validation - batch controls, transaction controls, check digit system, and hash totals. Data Entry forms design. User interface design purpose, characteristics, actions to be incorporated, navigation, message display, dialogue design	25%
IV	Development and testing. Tools for documentation - HIPO, Structured flowcharts, warnier/orr diagrams. quality assurance - testing, verification and validation . Testing strategies. Creation/conversion of master files. Loading the database. Preparation of system documentation. User training, conversion from old system to new system. Post implementation review. System Development Management - estimation of development time, team management. Hardware/ software selection - selection criteria, benchmarking, purchase/ lease/rent options	25%
